EXPERIENCE

Flutter Developer

Nowa

Feb 2025 – Present

Delaware, USA (Remote)

- Built **Nowa Go** on my own end to end — a **Flutter** mobile app that lets users build Flutter apps with Nowa from their phone.
- Integrated **Stripe** and **RevenueCat** into the builder, so users can add subscriptions and in-app purchases to their own projects without writing payment code.
- Cut load times for large projects by about a third by loading packages in the background while users keep working, instead of blocking on open.
- Wrote a cross-platform auto-updater for the **Flutter** desktop apps on **Windows and macOS** to handle release delivery.
- Built the data-binding layer that wires UI components to **Supabase, Firebase, and Xano**, and an importer that turns **Postman** collections, **OpenAPI/Swagger** specs, and **cURL** commands into working API calls.
- Implemented **FCM** push notifications with deep linking and Google Maps components inside the desktop editor, so users can drop them into their own projects; added **Supabase MCP** for managing databases without leaving the app.

Software Engineer

Dimensions Studio

Nov 2023 – Jan 2025

Amman, Jordan

- Delivered production-ready **Flutter** applications end to end — gathering requirements, designing solutions, and shipping to the App Store and Google Play.
- Worked directly with stakeholders to turn business needs into technical specifications and features.
- Owned the full lifecycle — development, testing, bug fixing, and store releases — keeping a consistent architecture across multiple shipped apps.

PROJECTS

Vytlc

Padel Booking & Community Application

2026

Flutter, WidgetKit, watchOS

- Built **iOS home screen and Lock Screen widgets** with **WidgetKit** and an **Apple Watch** app, sharing state with the Dart layer over app groups and platform channels.
- Integrated **Google Maps** for court and club discovery, letting players find and book nearby venues.
- Refactored the theme system into centralized design tokens, reworked the navigation layer for consistent routing, and rebuilt the in-app gear marketplace.

Klubbrabatten

Retail Offers & Rewards Application (Sweden)

2026

Flutter, Supabase

- Built the full **Flutter** app for a Swedish offers platform where users buy digital discount booklets and earmark each purchase for a local sports club.
- Implemented authentication and offer redemption flows on **Supabase**, plus map-based discovery of nearby participating stores.
- Extended Nowa-generated code with custom logic for application-specific functionality.

Irakey

C2C Marketplace Mobile Application

2024

Flutter, ASP.NET

- Developed a consumer-to-consumer marketplace app allowing users to list, search, and manage products with images and real-time updates.
- Implemented **Cubit** for state management and **Dio** for networking against ASP.NET services; handled development through deployment and post-release fixes.

Elite Stocktaking

Multi-Tenant SaaS Inventory System

2024

Flutter, REST APIs

- Built a multi-tenant stocktaking system focused on speed and accuracy for enterprise inventory workflows.
- Implemented high-performance barcode scanning with reliable data sync, optimized for large inventory datasets.

TECHNICAL SKILLS

Core: Flutter, Dart, Cubit / BLoC, Provider, Dio, platform channels, WidgetKit & watchOS integration

Backend & Cloud: Supabase, Firebase (FCM), REST APIs, Google Cloud, Docker

Mobile & Distribution: Xcode, Apple Developer Program, Google Play Console, code signing, OTA updates

Tools: Git, Postman, VS Code, JetBrains IDEs

EDUCATION

Princess Sumaya University for Technology

B.Sc. in Software Engineering

Oct 2021 – Aug 2025

Amman, Jordan
